

Freedor SmartSound™

Makes opening heavy doors effortless

Freedor SmartSound is a unique wireless solution that allows fire doors to be placed open at a convenient angle, automatically closing them when the fire alarm sounds. It makes heavy fire doors effortless to open, enabling easier access.

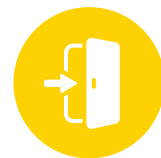

Benefits

Keep fire doors open at a convenient angle

No more struggling with heavy fire doors

Enables greater access throughout the building

Peace of mind with a two-year warranty

Wire-free technology – no costly hard wiring required

Meets all regulatory requirements

Freedor SmartSound™

Freedor SmartSound is a unique wireless device installed at the top of a fire door that allows the door to swing freely and be left open at a convenient angle.

The SmartSound listening technology will identify the sound of the fire alarm and close the doors, preventing the spread of smoke and fire.

Available in gloss silver, brass and white or in matte black.

“ Our residents, particularly those that are a bit older, struggled with heavy fire doors. Freedor SmartSound really takes the weight away, and we like the fact that the door can be held open at any angle. ”

Jenny Broadway, Manager

“ They just do what they're supposed to do — they keep the doors open and close when the alarm sounds. ”

Kevin Plowright - Hotel Maintenance Manager
