

DorMag Pro

**Compact, compliant
and 100% wireless**

DorMag Pro is a wireless fire door magnet that holds open fire doors legally, allowing them to automatically disengage when an alarm is activated.

Benefits

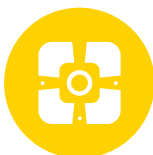

Controlled by ProHub, not
affected by background noise

Remote monitoring
via Site Manager software

Suitable for high-risk zones
including corridors, stairwells
and kitchens

Flexible fitting options

Magnetic hold and release

Expandable system - add
new Pro units at any time

DorMag Pro

DorMag Pro is radio-activated, which makes it ideal for noisy environments. The separate controller, ProHub, can be wired directly into any fire alarm system and allows you to monitor all door units from a central hub.

ProHub has optional activation of our Site Manager software, which provides real-time information about your Pro installation at different sites, accessible on any internet device.

DorMag Pro is an additional solution to the Fireco Pro Range allowing you to choose the ideal product that suits your environment.

“ Simply set and forget. They offer the flexibility to hold open the doors knowing they will close either manually (by the visible button) or close as set by the timer, but more importantly if the fire alarm goes off. ”

**Derek Grounds, Premises Manager
Seaford Primary School**

“ As well as proving to be more reliable than other hold-open devices, with no instances of unwanted release, the wireless installation means there's no requirement to run power cables. ”

**Dave Perkins, Deputy Maintenance Manager
Caterham School**
